

# LIFE GREAT BUSTARD

Cross-border protection of the  
*Great Bustard* in Central Europe  
2016 – 2024

[WWW.GROSSTRAPPE.AT](http://WWW.GROSSTRAPPE.AT)

The Great Bustard,  
*one of the heaviest  
flying birds in the whole world,*  
is an endangered species  
in all parts of its range.

# Project description

## Project title

Cross-border protection of the Great Bustard in Central Europe (LIFE NAT/AT/000834)

## Acronym

LIFE Great Bustard

## Beneficiaries and partners

The coordinating beneficiary is the Austrian Society for Great Bustard Conservation (ÖGG).

The project is implemented together with 9 project partners, 2 co-financiers and 1 cooperation partner.

## Project duration

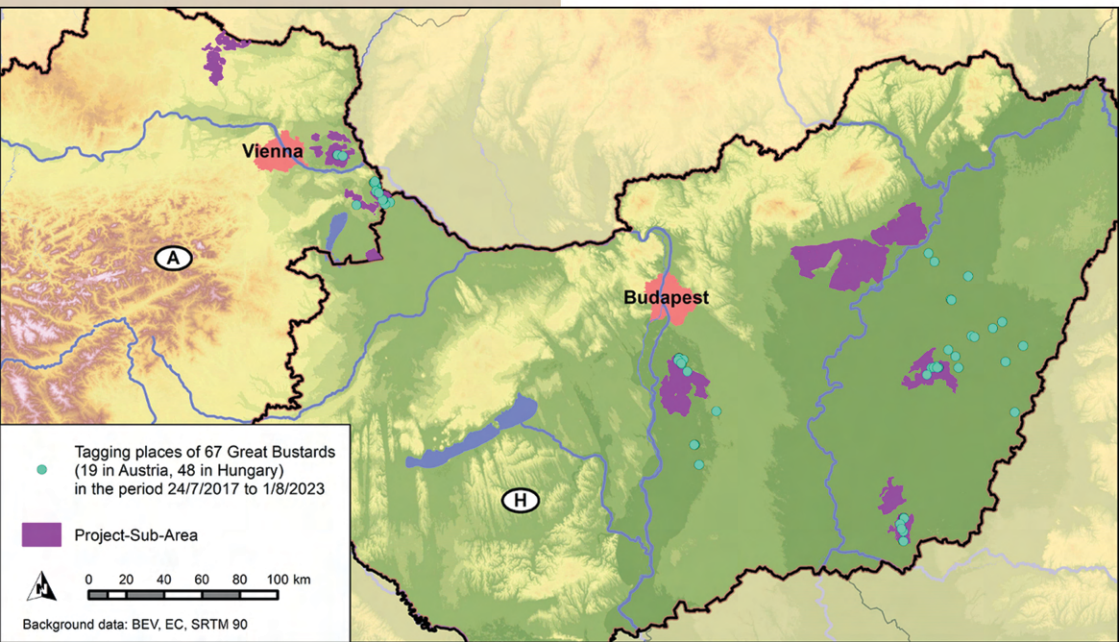

11.07.2016 – 31.10.2024

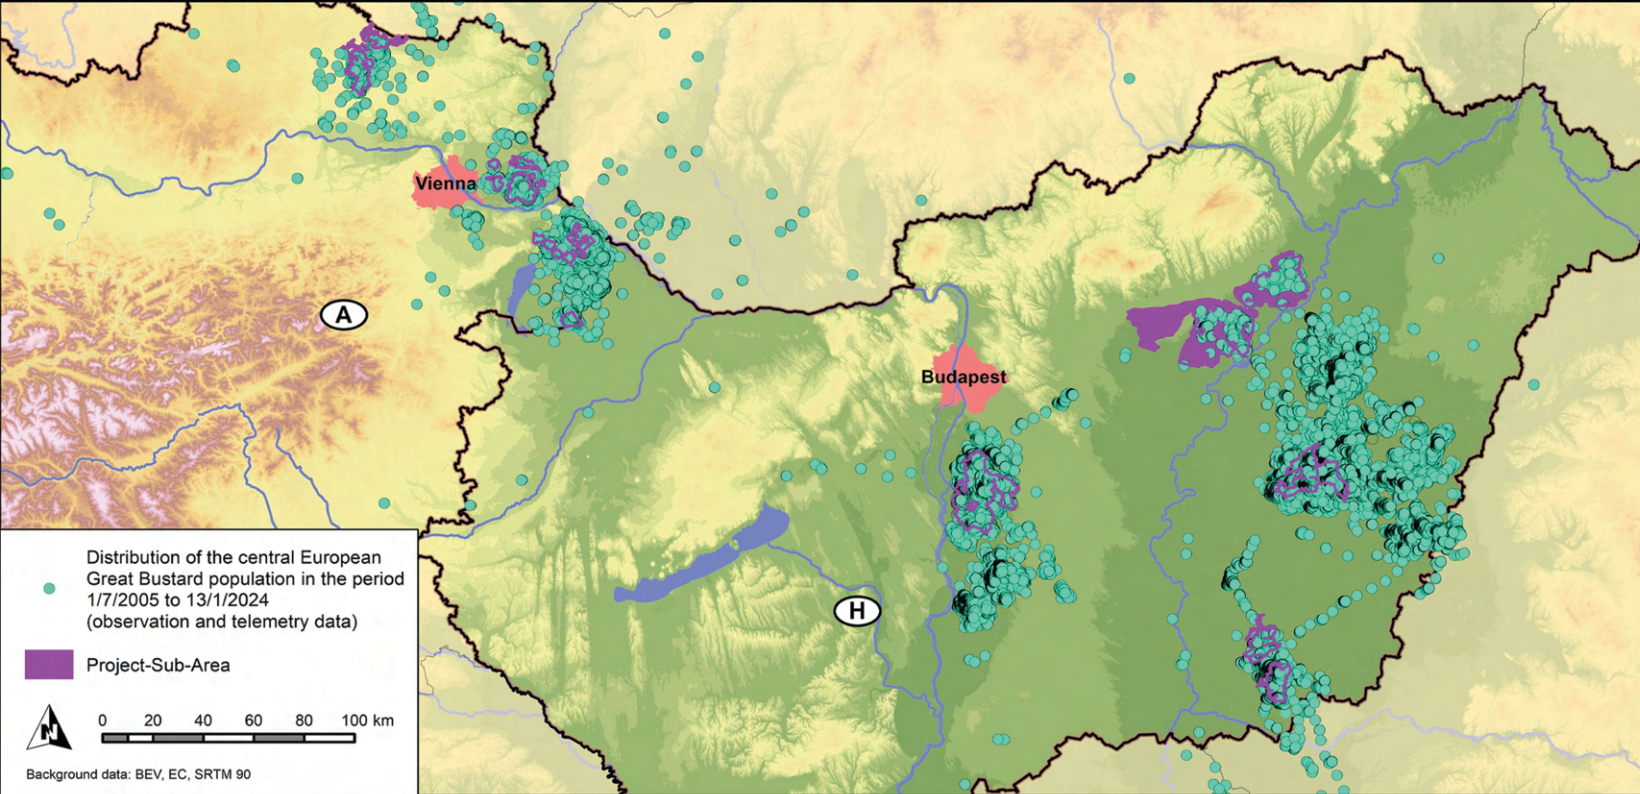

# Main project objectives

Austria (AT) and Hungary (HU) have been very active in Great Bustard conservation for several years. After two Austrian LIFE and LIFE+ projects and one LIFE project in Hungary now both EU-countries are implementing together a huge cross-border protection project for Great Bustards in Central Europe. Based on the positive effects of the former measures taken, the objectives of this LIFE project are to *continue intensive habitat management efforts, to reduce the threat of collision with power lines* - for many years the no. 1 mortality factor for immature and adult Great Bustards - and to *reduce predation*.

The LIFE project aims to support and maximise the *effectiveness of the cross-border protection* in Austria and Hungary through coordination of conservation measures and optimal communication.

Not only the world population but also the population of Europe has declined by more than 30 % in 11 years.

*However, thanks to conservation efforts like habitat management, reduction of the risk of collision with power lines and cooperation with farmers and hunters, the Great Bustard populations in Austria and Hungary increased.*

The West Pannonian Great Bustard population has been *significantly increasing for nearly two decades\**.

\*from 286 individuals in 2005 to 662 in 2023.

In Burgenland and Lower Austria in the last 20 years approx. 150 km of medium voltage power lines were first *placed into the ground* and then the overhead power lines and pylons were *removed*.

Furthermore high voltage power lines *were marked* to improve their visibility.

Reduction of the risk of collision with power lines by *marking and underground cabling*.

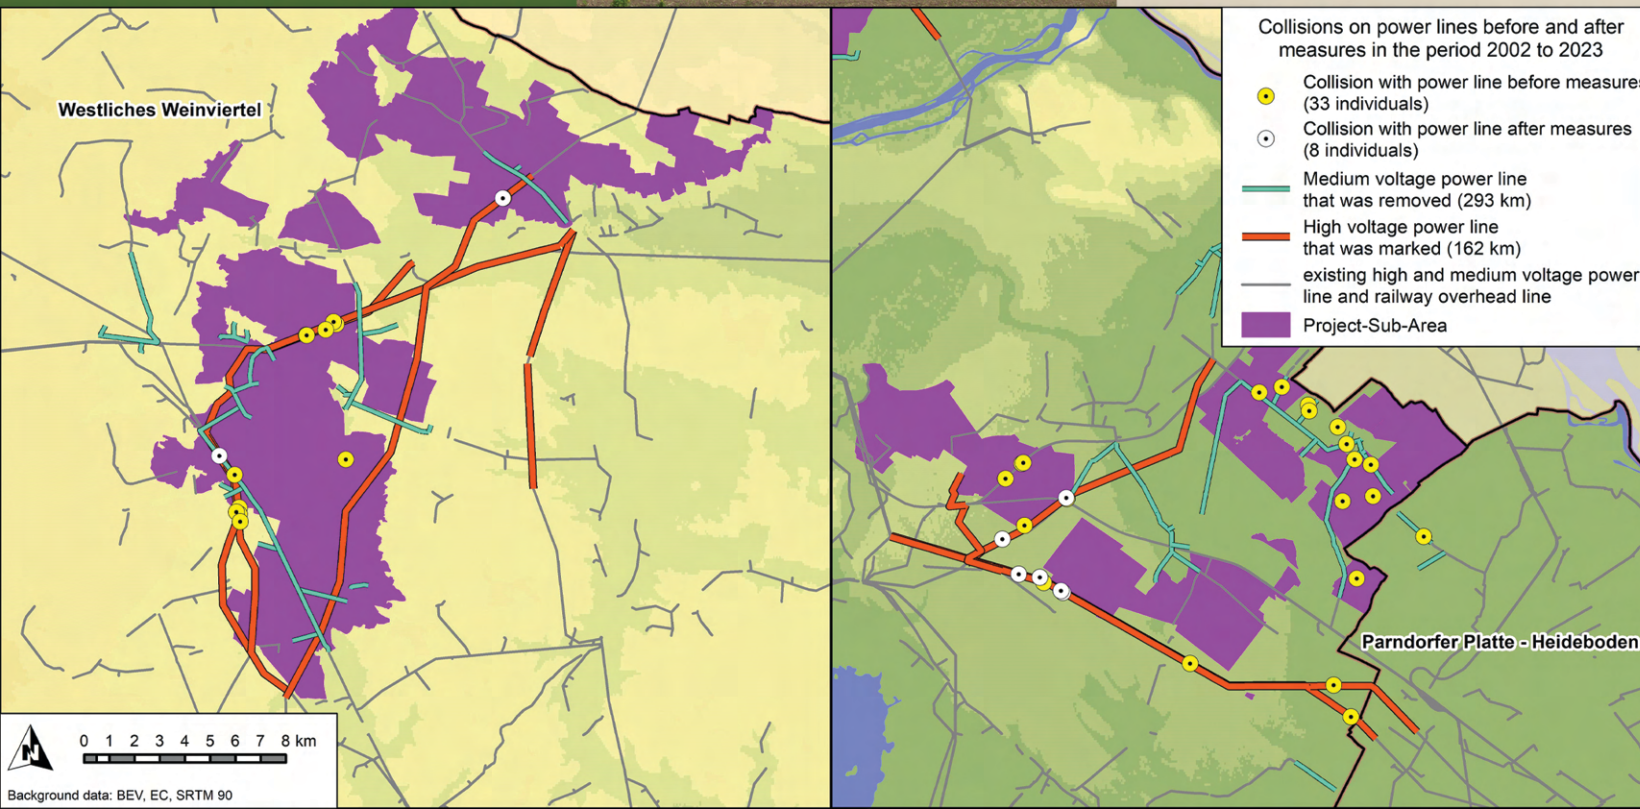

Marking of power lines and underground cabling are the *most effective* measures to protect the Great Bustards.

Before measures were taken within the different LIFE projects, 33 individuals died due to collision with power lines in the area of Westliches Weinviertel and Parndorfer Platte - Heideboden. After measures were taken, only 8 individuals died due to collision with marked power lines in these two areas.

Even though some distribution areas of the Great Bustards are safe now, there are still habitats where *measures need to be taken*.

The collaboration between farmers, hunters and local politicians in the frame of the LIFE Great Bustard project was essential *to create suitable breeding sites and protect them against disturbance.*

Farmers made use of the Austrian agri-environmental scheme "ÖPUL" by cultivating special fields and also ensured the access to food supply in winter.

Farmers ensured the access to rape fields for the Great Bustards in winter

Farmers and hunters were helping *to keep disturbance* in the Great Bustard areas *as low as possible* and were also *involved in the successful monitoring* of the Great Bustard conservation actions.

Raising awareness is an important tool in terms of the conservation of endangered species like the Great Bustard.

Within the LIFE project for the protection of the Great Bustard *information and observation points* were build during the last years. They are used by *thousands of visitors* every year who can enjoy the sight of Great Bustard flocks as the result of the successful LIFE projects.

The conservation will be *continued* on European level.

The Declaration on the long-term conservation of the Great Bustard in the tri-border region of Hungary, Austria and Slovakia and its surroundings was signed in September 2023 by the representatives of these three countries.

By this act they committed together to protect and improve natural conditions of the Great Bustard habitats and to continue monitoring and research for the benefit of the population, and last but not least, to cooperate with each other by sharing information on the current support provided to farmers under the EU Common Agricultural Policy.

Furthermore, the goal is to implement a Europe-wide project for the conservation of the Great Bustard.

## Coordinating beneficiary

ÖSTERREICHISCHE  
GESELLSCHAFT  
GROSSTRAPPENSCHUTZ  
(ÖGG)

The TB Raab GmbH was commissioned to implement the LIFE Great Bustard project.

## Project partners (Associated beneficiaries)

## Co-financiers and cooperation partner

 **Bundesministerium**  
Klimaschutz, Umwelt,  
Energie, Mobilität,  
Innovation und Technologie

This project is co-financed by the **LIFE Nature Programme** of the European Union.

Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the LIFE/GMA. Neither the European Union nor the granting authority can be held responsible for them.
